US Citizen in Mandeville, LA

Summary

Full-Stack .NET Developer experienced in enterprise web and desktop applications, data-driven business systems, and web design. Background in 3D/VFX production, 3D generalist work, and pipeline automation, with strong tool-building and practical problem-solving experience.

Professional Experience

Full-Stack Software Developer at Murphy Technologies

July 2023 to August 2025

- Led development and support of enterprise web applications using C#, .NET, PHP/Laravel, JavaScript, HTML, and CSS to support ERP, scheduling, payment, dispatch/addressing, and internal operations workflows
- Developed backend systems, REST APIs, and SQL-backed data access layers using Entity Framework, Dapper, Eloquent/Laravel ORM, and JSON request/response patterns to connect enterprise applications with business data and workflow logic
- Implemented data-driven UI and reporting using Razor, Blazor, WPF, Blade, Livewire, and DevExpress to improve usability, functionality, and reporting workflows
- Modernized legacy VB.NET and Oracle desktop applications by migrating business workflows to ASP.NET Core and Azure SQL, improving maintainability and supporting a cloud-based application architecture
- Built a TCP-based law enforcement inquiry service integrating Datamaxx, NCIC/NLETS messaging, binary message conversion, Blazor, and WPF MDT workflows to support real-time driver, vehicle, warrant, and dispatch communications
- Collaborated with stakeholders, end users, and developers in Agile environments using Git and CI/CD workflows to deliver features and support production systems

Technical Artist at Swaybox Studios

August 2018 to January 2023

- Delivered 3D/VFX production assets for film and commercial projects across matchmoving, 3D modeling, photogrammetry, fabrication, and 3D printing workflows
- Improved matchmoving workflows using object tracking and camera intrinsic data, eliminating the secondary pass previously required to prepare animation data for production
- Created Maya workflows and Python export scripts to transfer animation data into proprietary performance equipment, replacing manual puppeteer reenactment
- Automated animation rendering workflows in Maya using Python scripts, replacing manual After Effects processes and reducing time from days to hours
- Collaborated with directors and technical leads while leading and training junior team members to improve production handoffs, asset quality, and delivery consistency

Owner / Freelance 3D Artist & Web Designer

February 2007 to May 2023

- Produced 3D animations, models, and renderings for freelance clients using 3ds Max, Maya, Blender and zBrush
- Built a local render farm of Windows workstations using Autodesk Backburner to distribute animation rendering and improve delivery capacity for client projects
- Designed and built client web content, including an initial company website, while providing 3D modeling, rigging, animation, and rendering services across independent creative projects

Associate Technical Artist and Support Supervisor at TurboSquid

July 2010 to March 2016

- Prepared and optimized marketplace 3D assets, developed artist workflow tools for texture baking, prototyped high-poly to real-time asset pipelines using decimation and LOD creation, and created promotional renderings for business development and website front-page content
- Managed a 24/7 support team and collaborated cross-functionally to resolve technical issues, improve support workflows, and maintain reliable customer and member services

Projects

Government Spending Data Explorer

- Built a Next.js/React application with PostgreSQL to import, organize, and explore federal and state vendor payment and grant datasets, making public spending records easier to search and analyze

Photogrammetry Engine & Viewer

- Built a C++/C# WPF photogrammetry engine and viewer using OpenCV and COLMAP to detect image features, reconstruct camera positions, and visualize 3D scene data from photo sets

Madden Playbook Tools

- Built and distributed C# WinForms/WPF playbook editing tools and a custom Frosty Editor plugin UI to visualize, edit, and share Madden play data with an active modding community
